

Joyce Njoroge, MD

Cardiologist, Advanced Heart Failure; Clinical Assistant Professor, Stanford University Medicine

Dr. Njoroge is a board-certified physician and fellowship-trained cardiologist with the Advanced Heart Failure Program at Stanford Health Care. She is also a clinical assistant professor of medicine in the Division of Cardiovascular Medicine. Dr. Njoroge has extensive clinical experience diagnosing and treating cardiovascular complications that develop during pregnancy or postpartum. She currently provides care at the Stanford

Health Care Heart and Vascular Clinic with a particular focus on patients with a history of pregnancy-associated heart failure and cardiomyopathy. Dr. Njoroge's research efforts involve identifying inherited genetic changes and biological markers that could help improve screening and care for pregnant women in higher risk populations. This includes determining the causes of disproportionately high incidences of heart-related complications and deaths experienced by Black women during and after pregnancy. Dr. Njoroge is also currently recruiting patients for a large-scale, multicenter clinical trial evaluating a drug to treat cardiovascular complications during pregnancy. Dr. Njoroge has published her work in numerous prestigious peer-reviewed journals, including *Circulation Research* and the *Journal of Cardiac Failure*. She also co-authored a chapter on cardiovascular disease in pregnancy in the most recent edition of the book *Current Diagnosis and Treatment: Cardiology*. Dr. Njoroge is a member of the Association of Black Cardiologists, the American College of Cardiology, the American Heart Association, and the Heart Failure Society of America.
